Hicksville, New York

## SUMMARY

---

QA Automation Engineer with hands-on experience building Selenium-based test frameworks in C# and integrating automated testing into CI/CD pipelines. Brings a full-stack perspective to quality — having built and tested modern web applications using React and .NET, which means understanding how systems are put together, not just how to break them. At PrintScan, helped develop an automation framework that reduced manual regression testing by over 40% and improved release reliability across sprint cycles.

## SKILLS

---

**Automation & Testing:** Selenium WebDriver, NUnit, Postman, Page Object Model, Explicit Waits, Parallel Execution

**Languages & Frameworks:** C#, JavaScript, React, Django, HTML, CSS, .NET

**CI/CD & Tooling:** GitHub Actions, Git, Vite, Allure

**QA Methodologies:** Manual Testing, Regression Testing, Smoke Testing, E2E Testing, Defect Tracking, Agile / SDLC

## PROFESSIONAL EXPERIENCE

---

### Quality Assurance Specialist — PrintScan Fingerprinting

July 2023 – December 2023 · New York, NY · Hybrid

- Collaborated with a senior developer to architect and build a Selenium-based regression testing framework in C#, resulting in a >40% reduction in manual testing effort during sprint cycles.
- Performed manual and automated testing across multiple environments, identifying defects and ensuring application stability and adherence to functional specifications.
- Investigated, reproduced, and documented bugs with precision, collaborating with developers to resolve issues within sprint cycles using Agile methodologies.
- Contributed to the C# codebase with bug fixes and feature development; engineered a database-driven location search system that improved site navigation and SEO.
- Developed custom automation tools for internal workflows, including automated appointment creation for testing, significantly improving team efficiency.

### Guest Advocate — Target

December 2021 – March 2023 · New York, NY · On-site

- Delivered customer service in a high-volume retail environment; developed communication, problem-solving, and adaptability skills in a fast-paced team setting.

## PROJECTS

---

### Selenium UI Test Framework

C# · NUnit · Selenium WebDriver 4 · Allure · GitHub Actions | [github.com/logangarbacki/react-portfolio-selenium-tests](https://github.com/logangarbacki/react-portfolio-selenium-tests)

- Architected a full Page Object Model (POM) framework in C# and NUnit targeting a live production React/Vite SPA — 46 tests across 4 categories (Smoke, Regression, Negative, E2E) covering 7 SPA sections.
- Resolved real-world browser automation challenges: implemented scroll-into-view wait logic inside DriverUtils.Find to handle IntersectionObserver-deferred elements, and built a JS innerText fallback to extract CSS-animated transparent hero text that Selenium's .Text returned empty.
- Integrated Allure.NUnit reporting with automatic screenshot capture on failure; report is generated and deployed to GitHub Pages after every CI run.
- Enabled parallel fixture execution (ParallelScope.Fixtures, LevelOfParallelism(2)) with retry logic on flaky tests, balancing speed against CI resource constraints.
- Configured GitHub Actions pipeline to trigger on push to main, daily scheduled runs, and portfolio repository\_dispatch deployment events — enabling cross-repo continuous testing.

## Little Lemon — Full-Stack Restaurant Web App

React · JavaScript · Django · Django REST Framework · SQL · Vercel · Railway | [meta-front-end-developer-capstone-three.vercel.app](https://meta-front-end-developer-capstone-three.vercel.app)

- Built a React SPA with menu browsing, cart, reservations, and token-based user authentication — users must register and sign in to reserve or order.
- Developed a Django REST API backend deployed on Railway; cart and reservation data persists to a SQL database, fully manageable via Django admin panel.
- Admins can create, edit, and remove menu items including daily specials in real time; integrated toast notifications for user feedback across all flows.

## Personal Portfolio Website

React 18 · Vite · CSS Animations | [logangarbacki.dev](https://logangarbacki.dev) · [github.com/logangarbacki/react-portfolio-website](https://github.com/logangarbacki/react-portfolio-website)

- Designed and built a fully responsive single-page portfolio with custom CSS keyframe animations, IntersectionObserver scroll reveals, and a live canvas particle system.
- Integrated GitHub Actions deployment pipeline with automated Selenium UI tests triggering on every push, establishing continuous quality validation on a live production site.

## CERTIFICATIONS

---

**Meta Full-Stack Engineer Certificate** — Meta · Issued Apr 2026

**Software Testing, Deployment, and Maintenance Strategies** — IBM · Issued Apr 2026

**Software QA & Test Automation Engineering** — Coursera · Issued Apr 2026

**Selenium 4 Fundamentals with C#** — Pluralsight · Issued Aug 2023

**Foundational C# with Microsoft** — Microsoft / freeCodeCamp · Issued Sep 2023

## EDUCATION

---

**Hicksville High School** — High School Diploma

Graduated 2023 · GPA: 3.8 · AP Computer Science A — Score: 4
