SUMMARY

Self-taught QA engineer and front-end developer with real-world experience across the full stack — from building Selenium automation frameworks in C# that cut manual testing by 40%, to shipping production React applications with CI/CD pipelines. Comfortable owning both the code and the quality, with hands-on experience in test architecture, browser automation, and modern front-end development. Brings a developer's perspective to QA and a tester's eye to development.

PROJECTS

Selenium UI Test Framework

C# | NUnit | Selenium WebDriver 4 | GitHub Actions — github.com/logangarbacki/react-portfolio-selenium-tests

- Architected a full Page Object Model (POM) test suite in C# and NUnit targeting a live production React/Vite SPA, validating UI, navigation, and content correctness.
- Enabled parallel fixture execution via NUnit's *ParallelScope.Fixtures*, reducing total test run time across Smoke and Regression test categories.
- Configured GitHub Actions CI/CD pipeline to trigger on push to main and on external *repository_dispatch* events from the portfolio repo, enabling cross-repo test automation.

Personal Portfolio Website — logangarbacki.dev

React 18 | Vite | CSS Animations — github.com/logangarbacki/react-portfolio-website

- Designed and built a fully responsive single-page portfolio in React 18 and Vite with custom CSS keyframe animations, intersection-observer scroll reveals, and a live canvas particle system.
- Integrated a GitHub Actions deployment pipeline and configured Selenium UI tests to trigger automatically on every push, establishing continuous quality validation on a live production site.

Meta Front-End Developer Capstone

React | JavaScript | CSS — github.com/logangarbacki/meta-front-end-developer-capstone

- Capstone project for the Meta Front-End Developer Professional Certificate program, demonstrating component-based UI development, state management, and responsive design in React.

PROFESSIONAL EXPERIENCE

Quality Assurance Specialist

July 2023 – December 2023

PrintScan Fingerprinting — New York, United States

- Collaborated with a senior developer to architect and build a Selenium-based regression testing framework in C#, resulting in a **>40% reduction** in manual testing effort during sprint cycles.
- Performed manual and automated testing across multiple environments, identifying defects and ensuring application stability and adherence to functional specifications.
- Investigated, reproduced, and documented bugs with precision, collaborating with developers to resolve issues within sprint cycles using Agile methodologies.
- Contributed to the C# codebase with bug fixes and feature development, and engineered a database-driven location search system that improved site navigation and SEO.
- Developed custom automation tools for internal workflows, including automated appointment creation for testing, significantly improving team efficiency.

Guest Advocate

December 2021 – March 2023

Target — New York, United States

- Provided exceptional customer service and resolved inquiries efficiently in a high-volume environment, developing strong communication and problem-solving skills.

EDUCATION

Hicksville High School — High School Diploma

2023

SKILLS

Automation & Testing: Selenium WebDriver, NUnit, Cypress, JMeter, Postman, Page Object Model, Explicit Waits, Parallel Execution

Languages & Frameworks: C#, JavaScript, React, HTML, CSS, .NET

CI/CD & Tooling: GitHub Actions, Git, Vite

QA Methodologies: Manual Testing, Regression Testing, Smoke Testing, Functional Testing, Defect Tracking, Agile / SDLC

CERTIFICATIONS

- **Meta Front-End Developer Professional Certificate** — Meta — *Issued Apr 2026*
- **Software QA & Test Automation Engineering** — Coursera — *Issued Apr 2026*
- **Software Testing, Deployment, and Maintenance Strategies** — IBM — *Issued Apr 2026*
- **Selenium 4 Fundamentals with C#** — Pluralsight — *Issued Aug 2023*
- **Foundational C# with Microsoft** — Microsoft / freeCodeCamp — *Issued 2023*
